## Prioritize and Plan | Barriers to Resilience Funding and Finance

## **Opportunity Mapping**

The following table appears in the *Ready-to-Fund Resilience Toolkit* and references elements within the Toolkit. Each section identifies common barriers within four categories: economic, capacity, cultural, and regulatory. The characteristics mentioned that can be used to address these barriers can be found in the *Ready-to-Fund Resilience Toolkit*<sup>1</sup>.

<ul> <li>prioritize wealthier communities over those historically disadvantaged. LMI and BIPOC communities often have the most to gain in terms of social and environmental co-benefits of climate resilience projects, yet these considerations often are omitted from project prioritization considerations.</li> <li>Some resilience projects don't have a direct revenue source. Unlike renewable power that generates energy that can be sold, a flood mitigation project does not have a revenue stream. Investors consider projects without revenue associated with them as "unbankable."</li> <li>Guidebook characteristics that address this barrier: Characteristic 7 Characteristic 8</li> </ul>	<ul> <li>upfront expenditures, debt financing often is needed.</li> <li>To create debt financing, project proponents must identify and commit to securing a dependable revenue source that will repay investors over a longer time period.</li> <li>For communities, the bigger issue than access to financing sources is the shortage of funding to pay back financing.</li> <li>Guidebook characteristics that address this barrier: Characteristic 5 Characteristic 7 Characteristic 8</li> </ul>	Guidebook characteristics that address this barrier: Characteristic 1 Characteristic 2 Characteristic 6	<ul> <li>Sometimes, grant administration rules are so onerous that jurisdictions don't apply.</li> <li>No funding exists for planning a project.</li> <li>Many debt service tools, such as taxes, require administrative resources to generate broad public support to meet voter approval thresholds.</li> <li>Guidebook characteristics that address this barrier: Characteristic 1 Characteristic 2 Characteristic 6</li> </ul>
<ul> <li>CAPACITY - competing priorities.</li> <li>Planning for adaptation and resilience projects is challenging because at the programmatic and project level, communities can face conflicting guidance about what needs to be done. For</li> </ul>	<ul> <li>CAPACITY - novelty and transaction costs.</li> <li>Several newer and "innovative" finance tools, such as social impact bonds and insurance-linked securities, have emerged in funding and financing infrastructure for adaptation and resilience</li> </ul>	<ul> <li>CULTURAL - siloed approach.</li> <li>Often, the climate resilience agenda isn't a priority or lacks the understanding of the importance of cross-agency involvement.</li> <li>Compounding this lack of connectivity is little knowledge of, and capacity for, the</li> </ul>	<ul> <li>CULTURAL - misalignment.</li> <li>When incentives and regulations misalign across local governments, investors can find it difficult to assess projects.</li> <li>Creating financing structures and jurisdiction for each project increases transaction time and</li> </ul>

<ul> <li>instance, a state may advocate that coastal communities consider sea-level rise in their decisions while also asking to increase their housing stock.</li> <li>Coastal communities face significant housing shortages, so development opportunities can fall in low-lying areas at risk from sea-level rises. Western fires underscore the risks of living at the wildland urban interface. Redeveloping homes in the same locations could exacerbate climate-related risk.</li> <li>Guidebook characteristics that address this barrier: Characteristic 1 Characteristic 7</li> </ul>	<ul> <li>projects. These tools are largely unproven in the mainstream financing market.</li> <li>Innovative financing mechanisms may be more difficult to use in the near-term since the presence or perception of transaction risk may exist because of a lack of performance and other data.</li> <li>Guidebook characteristics that address this barrier: Characteristic 2 Characteristic 5 Characteristic 10</li> </ul>	<ul> <li>resilience needed by finance and legal staff in particular and elected officials.</li> <li>If a resilience agenda has no or low priority, it can prove difficult to persuade department and agency leads of the need for cross-sector/ cross-discipline resilience work.</li> <li>Guidebook characteristics that address this barrier: Characteristic 1 Characteristic 2</li> </ul>	<ul> <li>costs. Infrastructure experts estimate that the use of lawyers, engineers, and other advisers can equal one-to-five percent of project costs that prove difficult to recoup since they are not capitalized.</li> <li>For resilient infrastructure projects, transaction and development costs may even be higher because limited data on financial and risk performance makes deal evaluation more complicated.</li> <li>Guidebook characteristics that address this barrier: Characteristic 1 Characteristic 6 Characteristic 10</li> </ul>
<ul> <li>CULTURAL - failure to center equity.</li> <li>Disadvantaged and vulnerable communities often face disproportionate impacts from a changing climate. Yet, they are deprioritized for climate resilience investment.</li> <li>These front-line communities with fewer resources will often possess limited capacity to pursue funding, secure financing, and deploy monies for adaptation and resilience</li> </ul>	<ul> <li>REGULATORY - climate risk and resilience requirements are absent within policy and decision-making.</li> <li>Information about and measures to address risks from climate change are not incorporated into most policies governing public and private institutions.</li> <li>The absence of quantitative data on the financial and risk performance of resilience infrastructure projects</li> </ul>	<ul> <li>REGULATORY - unfavorable and uncertain regulations and policy.</li> <li>Few regulatory incentives and policies exist to attract and secure private investors effectively. Climate risk is often absent or underemphasized in decision-making processes for investors.</li> <li>Because climate change is often perceived as slow-moving with impacts far into the future, climate risks are undervalued</li> </ul>	<ul> <li>REGULATORY - planning.</li> <li>Governments often fail to develop long-term plans so infrastructure needs are unknown.</li> <li>Even with a long- term plan, the pipeline may not be well communicated, resilient or equity- centered.</li> <li>When the number of projects is unclear, investors find it difficult to justify investing in diligence and credit-evaluation expertise or in partnerships.</li> </ul>

<ul> <li>projects.</li> <li>Existing institutionalized funding and financing practices could further increase disparities in community resilience if such practices do not change to explicitly remove inequity.</li> <li>Guidebook characteristics that address this barrier: Characteristic 3 Characteristic 4</li> </ul>	<ul> <li>exacerbates this problem which can incentivize risky behavior.</li> <li>Ahead, economic and financial realities will demand better accounting for climate risk in public and private sector policies and programs.</li> </ul> Guidebook characteristics that address this barrier: Characteristic 8 Characteristic 10	or not accounted for in many types of market investments. <b>Guidebook characteristics that</b> <b>address this barrier:</b> Characteristic 10	<ul> <li>The project proposal and design processes often are decoupled from implementation as well as funding and finance considerations.</li> <li>Guidebook characteristics that address this barrier: Characteristic 9</li> </ul>
