

Assess Vulnerability and Risk | Vulnerability and Risk Synthesis Report

WHO

This template is for the practitioner at the end of the Assess Vulnerability and Risk step.

WHAT

This Synthesis Report serves as a compilation of the results and what has been achieved thus far. It can be used throughout the remainder of the project, and after, as a reference of what was assessed, how it was assessed, and the results of the assessment.

SUPPORTING RESOURCES

- Pull the rulesets developed in [3.4 Ruleset Development - Worksheet](#) into this report for each hazard
- Return to [2.3 Community Asset Themes - Worksheet](#) and copy the themes used for the project
- Community asset types, including those with high criticality can be found in [2.10 Community Asset Types and Spatial Data - Worksheet](#)
- Use [3.10 Develop Impact Statements - Worksheet](#) to help in summarizing central challenges
- [3.9 Preliminary Results Feedback - Worksheet](#) can be useful for gathering additional insights about the analysis and project thus far

INSTRUCTIONS

- Fill in the community asset themes and types used for this assessment.
- Make a list of the community asset types that are used to determine high criticality.

There are two pages for a single hazard. Make as many copies of them as there are hazards. For each hazard:

- Fill in the name of the hazard assessed:
 - How was it defined for the project
 - How was it assessed; include the rulesets used
- Use the impact statements developed to identify up to five central challenges the community is facing now or will face in the future.

Community Assets

Community Asset Themes

THEME	TYPES

Community Assets with High Criticality

List

Hazard

How is this hazard defined?

Data used, extent

How was it assessed?

Brief description and rulesets

	Sensitivity	Adaptive Capacity
Low		
Medium		
High		

	Probability	Magnitude of Impact
Low		
Medium		
High		

Climate-Related Impacts of Greatest Concern

Challenges can be identified by returning to the impact statements. From these statements, summarize themes and patterns. Challenges can be about a certain hazard, neighborhood, people and community assets, or a combination of those. These will be the things that the team will most want to address through identifying and prioritizing options throughout the following steps. Make some notes below to finalize these challenges and then fill them into the table.
